5. RATED OVERALL LIFTING LOAD TABLE

5-1 Notes on rated overall lifting loads

- (1) All rated loads are based on the machine being operated on the firm, level, uniformly supporting surface ground, at any point of 360-around the machine within 78% of tipping load and forward stability factor over 1.15.

Working radius is horizontal distance from center of rotation to a vertical line through the center of gravity of the load.

- (2) To determine actual lifting loads, the weight of all lifting devices such as hook must be reduced from the lifting loads.

250 ton hook	2,900 kg	60 ton hook	1,200 kg
200 ton hook	2,700 kg	30/25 ton hook.....	1,000 kg
150 ton hook	2,400 kg	13.5 ton hook	600 kg
100 ton hook	1,400 kg		

- (3) The following weight must be reduced from the lifting loads to determine rated lifting loads for main boom when the jib is equipped.

Aux. jib	800 kg	25.0 m jib	4,900 kg
13.0 m jib	3,500 kg	31.0 m jib	6,000 kg
19.0 m jib	4,000 kg	37.0 m jib	6,700 kg

- (4) Depending on the number of part lines, rated lifting loads are limited as follows;

1 part line	upto 13.5 ton	9 part line	Upto 112.5 ton
2 part line	upto 25.0 ton	10 part line	Upto 125.0 ton
3 part line	upto 37.5 ton	11 part line	Upto 137.5 ton
4 part line	upto 50.0 ton	12 part line	Upto 150.0 ton
5 part line	upto 62.5 ton	13 part line	Upto 162.5 ton
6 part line	upto 75.0 ton	14 part line	Upto 175.0 ton
7 part line	upto 87.5 ton	15 part line	Upto 187.5 ton
8 part line	upto 100.0 ton	16 part line	200.0~250.0 ton

According to ANSI B30.5-1.7.1

- (5) The Aux. jib can be equipped with the range of boom length from 18 m to 87 m boom. To determine the rated lifting loads, 0.8 ton is reduced from the lifting loads in the same boom length in the lifting load chart.. However the max. lifting loads should not exceed the 13.5 ton.
- (6) When the 13 m~37 m jib mounted, the lifting loads to be determined by "Jib Rated Lifting Loads".
- (7) The total weight of the main hook and the jib hook must be reduced from the rated load when lifting on the Jib hook with the main hook being attached.
- (8) The angle formed by the extension line of main boom and the centerline of jib (offset angle) should not exceed 30 degree while the loads being lifted.
